

**For Precision Stamping
at High Speeds, a Minster
Press Gives the Most
for the Money**

"To meet today's tolerances and be competitive on large volume stampings you must go to precision, high speed, automatically fed presses. Comparison of competitive presses on important features of design, construction and speed, proved to us that Minster presses gave us the most for the money," says Mr. Harry Martens, President of Means Stamping Co., Saginaw, Michigan.

- On this 500 ton Minster E2 press, the massive eccentric shaft and twin connections, accurate and rigid slide guiding and speeds from 40 to 80 spm give up to 20% more productivity on many jobs . . . with maintenance costs lowest of any other presses.
- Minster "job-tailored" this press with an extra heavy bed, special speed controls and automatic slide feed. We can give you the most for your money too. Write to: **The Minster Machine Company, Minster, Ohio, U.S.A.**
