

Robinson Tool & Die Inc.

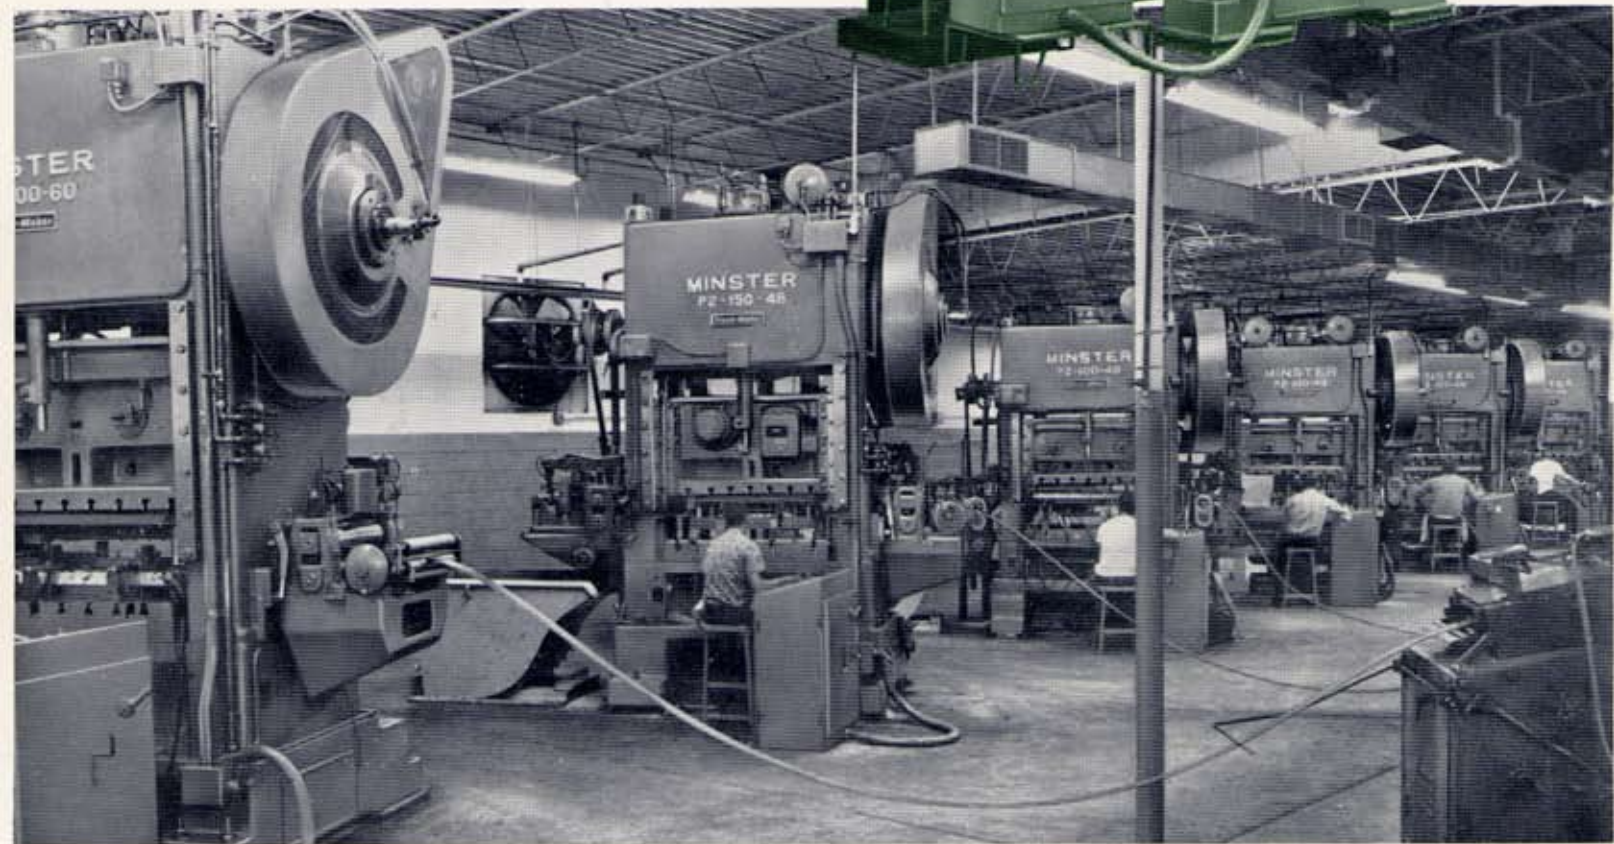

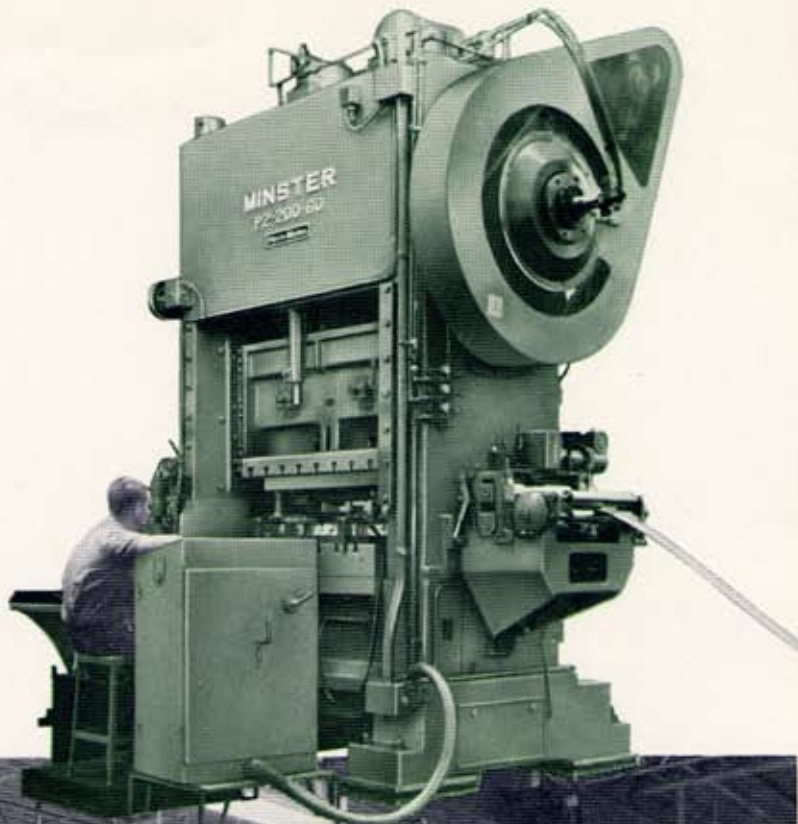

"Minster Piece-Maker® quality helps us sell...helps us grow"

"Going to the best press equipment has permitted us to get precision stamping jobs that might not have come our way if we had purchased lower priced, less accurate machines. Minster Piece-Makers help us sell," reports Mr. Kenneth Boehler, Plant Manager of Robinson Tool & Die Inc., Richmond, Kentucky.

This job stamper, small and relatively unknown a few years ago, has had fast and profitable growth. They knew of Minster's reputation for quality equipment and several press users verified it by recommending Minster presses. The purchase of their first Piece-Maker P2-100 in 1964 was possibly the turning point for Robinson Tool & Die. Since then they have purchased six more Minster P2's, one at a time. Each one has helped them sell their increased capability and served as a stepping stone to more growth and profit.

Minster P2 Piece-Maker presses for automatic production with progressive dies, are the safest investment for stampers who go after the toughest jobs. Bulletin 44 tells you why. Ask for a copy.
